

Design, Development and implementation of a Management Information System for Madhya Pradesh Khadi & Village Industries Board

Business Context

MP Khadi and Village Industries Board (MPKVIB) focuses on the production of saleable khadi products and also providing employment to rural community. It has headquarters in Bhopal, offices in 48 districts and 12 kendras. To manage such a wide network, there was a requirement to computerize the operations by developing a web based MIS.

C-Net provided a bilingual web based MIS within KVIB which facilitated in providing sustainable employment opportunities to rural communities especially the disadvantaged section. The solution linked the commercial based modules thus ensuring the proper monitoring and control of schemes which further led to the empowerment of weaker section.

C-Net Solution

- Developed a bilingual web based MIS which facilitated the ease of adoption to the system by rural communities
- Single level data point to reduce drudgery of manually collating and consolidating data at different levels
- Databases to provide for comparisons and analysis
- Development of templates for recording and standardized reporting
- Integration of different production centers, offices and headquarters led to efficient management of the entire system.

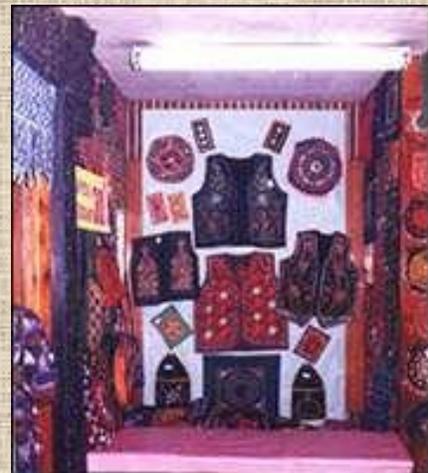

Challenges:

- Manual data collection from people at different levels and management of such huge amount of data
- Data obtained was manipulated thus it had to be deduplicated and organised before further processing
- All the district level tasks had to be monitored from a centre location
- Inappropriate distribution of funds between departments led to complex finance management process

The solution provided networking which incorporates high performance backbone of each of the district offices and centers

With the help of our solution, different functional applications were synced online which led to faster and accurate reporting
